Passport Validity: July 2034 Nationality: Indian

PROFESSIONAL SUMMARY

AI Software Engineer specializing in production GenAI systems, RAG pipelines, and agentic AI workflows. Delivered secure, self-hosted AI solutions for government and enterprise use cases, with strong focus on system design, semantic retrieval, workflow orchestration, and operational efficiency.

EXPERIENCE

Pleximus Inc.
AI Software Engineer

June 2025 – Present
Hybrid

- **PPPAC India (Department of Economic Affairs) — (RAG System)**
- Built a multi-tenant RAG system for the Government of India’s PPP infrastructure division - ingested 5000+ sensitive documents through an air-gapped pipeline (Docling, Surya OCR, Qdrant, Ollama), added an LLM-powered intent router that classifies queries into document retrieval, Text-to-SQL (with sqlglot AST validation), or navigation search via an auto-crawled site index - all behind JWT-scoped, per-ministry collection isolation with fully on-premise inference - no data sent to external LLM/cloud providers.
- Designed a production retrieval architecture from scratch - hybrid search (BGE-M3 dense + BM25 sparse) with RRF fusion and cross-encoder re-ranking, document-aware chunking that keeps Observation+Response pairs atomic and repeats table headers across splits, Celery-based async ingestion with webhook triggers and exponential retry, SSE progress streaming to the UI, and multi-turn conversation memory persisted per session.
- **Control Tower — AI-Powered Inventory Intelligence**
- Built a conversational AI layer over a multi-warehouse inventory system using Claude - handled multi-turn reasoning with stateful memory, automatic history pruning, and pushed alerts through Telegram and email when thresholds were crossed.
- Implemented a semantic-to-SQL pipeline using a LangGraph SQL agent, letting non-technical users query inventory data in plain English while keeping data integrity and access constraints intact.
- Designed LLM workflows for reorder recommendations, stock prediction, and operational insights - wired into the broader inventory system as actionable outputs, not just summaries.
- **Prompt Studio — Internal AI Prompt Template Generator**
- Built the company’s internal prompt engineering tool using LangChain and LangGraph - supports role-based workflow orchestration, RAG-backed context injection, and dynamic prompt assembly so the team can build and iterate on LLM interactions without touching code each time.

Benchmark IT Solutions
Software Engineer Intern

Jan 2025 – May 2025
Pune, Maharashtra

- Worked on backend API development using NestJS and frontend feature implementation using React.
- Assisted in debugging, optimizing application performance, and delivering sprint-based feature updates under senior engineer guidance.

Pleximus Inc.
Software Engineer Intern

June 2023 – July 2023
Mumbai, Maharashtra

- Assisted in backend development and testing of application modules.

TECHNICAL SKILLS

Languages: Java, Javascript, Python
AI / Backend: HTML, CSS, NodeJS, FastAPI, LangChain, LangGraph, RAG Pipelines, Hybrid Search (BGE-M3 + BM25), Prompt Engineering, AI Workflows, Ollama, Docling
Databases: PostgreSQL, MySQL, Vector Databases
Tools: Git, Linux, Docker, Redis
Concepts: REST APIs, Agentic Workflows, System Design, AI Integration, Semantic Search

CERTIFICATIONS

- AWS Cloud Practitioner Essentials – AWS
 - API Security – Udemy
- Docker Mastery – Udemy

EDUCATION

MBA (Master of Management Studies) in Information Systems & Business
Mumbai University (Correspondence)

CGPI: 7.4/10
May 2025 – April 2026

Bachelor of Engineering in Information Technology – CGPA: 8.96/10
Finolex Academy of Management and Technology, Mumbai University

2022 – 2025
Ratnagiri, Maharashtra

Diploma in Computer Engineering – CGPA: 8.49/10
Government Polytechnic Ratnagiri

2019 – 2022
Ratnagiri, Maharashtra
